Description

The **Thermion XG50 3-24x42 Thermal Riflelescope** by Pulsar makes an outstanding addition to a rifle setup for hunting varmints, big-game, and hogs. Its highly sensitive 640x480 microbolometer with 12-micron pixel detail gives the user spectacular clearness on its 1024x768 AMOLED display with a thermal detection range at 2400 yards with an 8x digital zoom. The XG50 comes with the highly-renowned BAE system with 8 color pallets and 13 variable electronic reticles to choose from, along with an advanced one-shot zeroing freeze function and five rifle profiles. The built in video and audio recording and has Wifi connectivity compatible with the Stream Vision App allowing the user to stream photos and video of the hunt onto a device for easy sharing.

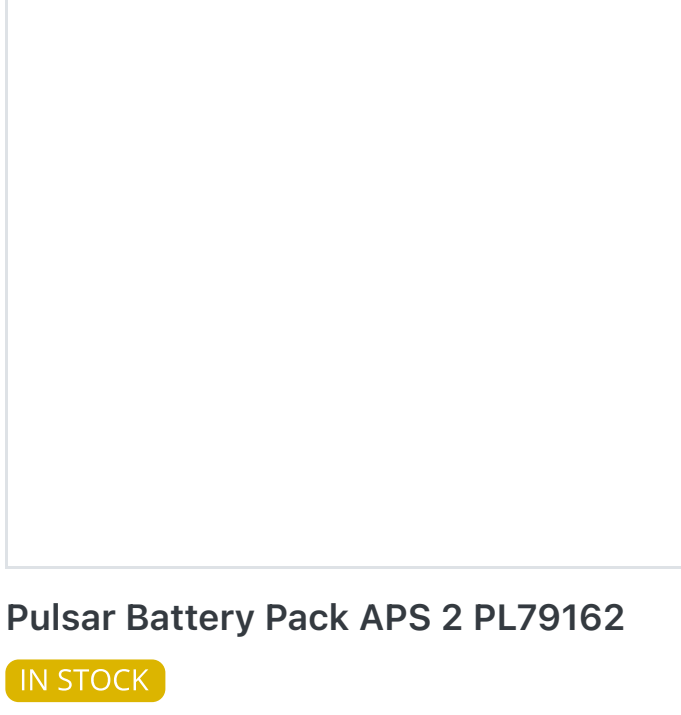

Features of the XG50:

- 2400 yard detection range
- 30mm Ring Compatible
- 640x480
- 12-Micron pixel detail
- Built in video, audio and photo recording
- BAE sensor
- 8 color pallet options to choose from
- 8x digital zoom
- Adaptable to external power supply
- Stadiametric rangefinder
- Forrest, Rock and Identification viewing modes
- Defective pixel repair

Phillip September 30, 2022

I do not have much knowledge when it comes to commercial brand thermal optic. However, I spent some time in the military and watched the NV/Thermal technology evolve with weapon sights and long range surveillance equipment over a 15 year period thanks to the GWOT. With that said, I knew coming into this that anything I could afford in 2022 would probably be equivalent to the equipment I used 10 or so years ago in... [read more](#)

Been looking for a thermal scope for awhile and was waiting to see what Xmas deals would come put. This was a \$6000.00 scope and one thermal scope of the year in 2021. BAE PROCESSOR which is what Trijicon uses. Super clear images and the price. For a quality 640x480 scope and pay \$3300.00 can't beat that

Kevin April 25, 2023

We ended up with two of these scopes. They are 100% awesome scopes. It is amazing how far you can see and how clear they are. We spotted a mouse running on a limb at 240 yards! My 11 and 14 year old figured out how to run these with ease. They made the following season recap completely on their own. They ran the scopes and edited the entire thing. Most of these shots are being made at 225 to 300 yards. [https://www.youtube.com/watch?v=w4MaFrQXct8](#)

Jody January 11, 2023

This scope is amazing! It can pick up a tiny bird at 100 yards no problem. This is my favorite optic by far!! Worth the money

David August 8, 2022

Nice product but should include another battery for the price of the unit . Seems to eat through batteries pretty quickly.

Jeffrey Miller December 26, 2022

Amazing scope for the price. First 3 nights of hunting harvested 13 coyotes. First couple of sets were unsuccessful because the images were so clear I thought the animals were closer then they appeared. After I figured out distances coyotes were dropping. Running coyotes are not a problem with this scope. Buy an extra battery because hunting below freezing temps battery life shortens and by carrying a second battery... [read more](#)

Michael November 8, 2023

I really do like this scope. The 640 resolution gives great images at 3x, with very good at 6x and passable at 12x and 24x. There are many options for color palate and reticle choices. Wi-Fi hookup to iPhone and Stream Vision app allow others to see what you see in real-time. I find two complaints - (1) battery life is rather short, external power supply might be needed for long hunt sessions, and (2) short menu... [read more](#)

Ed Baker December 16, 2022

Read a lot of great reviews on this thermal scope. Couldn't pass up the great deal from EuroOptic. Haven't hunted with it yet but took it out to the area where we hunt and became acquainted with the scope. I am very impressed with it's clarity and ease of use. I am looking forward to hog/coyote hunting this spring Nd summer with this scope. I had no issues with the purchasing process from EuroOptic. It was very... [read more](#)
