Product Overview

The RCBS Collet Bullet Puller is an excellent tool designed to help reloaders dismantle loaded ammunition to save valuable components. These collets are designed to easily pull out jacketed bullets without damaging them. These collets will only work with the standard RCBS Collet Bullet Puller. They are not compatible with the larger collet puller designed to work in presses with 1"-14 threads.

Fits: RCBS 1/8"-14 thread Collet Bullet Puller
Notes: Designed to pull jacketed bullets only

2 What bullet puller collet do you use for 358 hoganl cal.
Asked by Jeff 1 month ago

Add your answer

Product Owner - rickmag2
The information I have on the 358 Lagand is that the bullet diameter is 0.355. The collets have numbers to match the bullet diameter. For 0.355 dia. bullets, either the 0.340 Or 0.357 should work well.

5 Will this work on 45 /70?
Asked by Mike 4 years ago

Add your answer

Product Owner - jodiculotta
It should work. I used it to pull some 40-65 cartridges. You put the cartridge in the shell holder in your press and run it up into the mouth of the collette. Tighten the screw down and the collette tightens around the portion of the bullet extending outside of the brass. Pull up on the handle of the press and the brass drops down and the bullet is pulled out of the brass and remains in the collette. Empty the brass, put it back in the brass hole and position on a wooden block with an inertia style bullet puller.

6 I am thinking of purchasing the RCBS bullet puller. I only reload pistol cartridges 38⊃−⊃357 and 45acp. My question is , do I need to a separate collet for each caliber, or will 1 work for all? If I need a separate one for individual calibers can someone point me in the right direction for all calibers listed. thanks much

Product Owner - jaime729
For 38/.9mm and 38/357 you can use one collet. For .45 you will need a separate collet. Eddie

8 will this work with SB Alaskan .510 bullet
Asked by Wesley 1 year ago

Add your answer

Product Owner - fisherriet
I do NOT know the answer to this particular caliber. Each caliber (bullet diameter) requires its own caliber specific collet, so if there's a 50 cal collet (and it would surprise me if there were not a collet for this .510 caliber), then that collet is useless with the clamping die and shell holder that your bullet puller should work. I use the tool for .22, 9mm, .380 ACP, and .357 bullets all use caliber specific collets. DO NOT mix collets and dies. Each caliber requires its own collet and die. Hope this helps. Sincerely, Riet Fisher, Fisher Custom Reloading, LLC I have several collets which interchange in the one clamping die. Using each cartridge's regular shell holder. I can pull bullets from a wide variety of cases in my single stage press. You'll think of ways to expand the tool's utility to fit your work, too, I'll bet. It's very versatile. Best regards,RF

Most Liked Positive Review

In my country

In my country Venezuela, the .30-06 ammunitions it's very rare, you are very hard to find, extremely expensive too, but the .308 win it's very common and inexpensive, with this collet I can reload a lot of rounds made the 308 like collet as the bullet puller, I only buy the cheap .308 Win, pull the bullet, and use th...

Most Liked Negative Review

A bit too rough on hollow...

A bit too rough on hollow points. Leaves a mark 4 times out of 10, warps the bullet 3 times out of 10. Jacketed flat points, FMJs & cast bullets work great. Not too big a issue but haven't ENJOY this works like a charm. Will be faster, easier and less damaging to bullets than Kinetic pullers.

I have to buy again
The puller does not come with any collets, so you have to buy them. This system does work great though.

You I would buy it again!
Easy to use and fast at pulling bullets. I would buy it again but in a different caliber.

I would buy this product again.
You can't go wrong with anything RCBS and this collet is no exception. It's precise, it doesn't damage the bullets being pulled. Good tool that adds to my set of three other collects and the puller die.

Already saving me money
Fantastic bullet saver when developing loads. When a combination doesn't perform, use this to save bullets for later use with better loads. Also a must for the actual availability of 9.3 bullets.

RCBS bullet puller collet
Learn 5 calibers for rifle calibers and they all work without marring or damaging bullets. This is part of a system that works so much easier, faster and quieter than any kinetic type puller on the market.

40 cal/10mm Collet Bullet Puller
Works as designed. Better and easier than tearing up a floor carpet or table trying to remove a bullet from the brass. Not sure why everyone does not just buy this and be done with it. Too strenuous using the plastic hammer things

Works great for comical or round nose bullets.
These collets are said to not work on lead bullets. I've had no trouble pulling hard lead bullets with little or no damage. I've pulled jacketed bullets also and these RCBS pullers work great.
