Product Overview

MidwayUSA has just made a huge purchase of Factory Overrun bullets and we are passing the savings to our customers. Overrun bullets are bulk-packaged, excess bullets manufactured for special runs of ammunition. These bullets from a major manufacturer weren't needed for their production, but they are sure to fit right in to your schedule. Perfect for hunting, but priced for plinking! Hurry, quantities are limited and at these prices they won't last long! This is not loaded ammunition.

With its unique cross-member copper jacket design and a bonded front core, the A-Frame has become famous for its ability to combine 3 performance features - controlled expansion, deep penetration and 95% weight retention at all velocities. From tip to base, the A-Frame features a soft, semi-spitzer lead nose protects it against felt recoil while in the magazine. Next, the pure copper jacket begins to taper around the pure lead core at the tip of the bullet in an effort to help control the expansion rate at a wide range of velocities. The core towards the base of the bullet is where the momentum for the deep penetration comes from. The wrap-around jacket on the base of the bullet helps retain the bullet's original weight and prevent deformation.

Product was fine

Shipping is unacceptable. The combination of smart-post or shipping-innovations, whatever the name, starts out as either UPS or FEDEX then goes to the USPS for delivery is not good. The USPS flat rate is very good. The item gets to the last FEDEX/UPS terminal, then goes to the USPS for delivery- but there is a two to five day delay between the two. When shipping, avoid the combination method.
